

Wired for Success: Advantages of Custom RF Cables over OTS and DIY

Questions and answers

Question 1

How can I get a drawing if the RF Assembly Builder doesn't show an option or connector I need?

If you need a specific drawing or option that is not available in the RF Assembly Builder, the first step is to [reach out to Mouser](#). They will facilitate communication with our Product Manager, who will work on fulfilling your request. In most instances, creating a drawing for you will take a few days, depending on the complexity and novelty of the design or feature. If it's a brand-new RF connector design or incorporates a unique feature, it may take up to a week to complete. This process ensures that you receive a precise and accurate representation of the product you need.

Question 2

Can I place an order for the drawing number I received from the RF Assembly Builder?

While you may receive a drawing number from the RF Assembly Builder, it is important to note that this is used solely as a reference number and is not indicative of a part number. When you're ready to place an order, Molex will assign a specific part number in our ERP system during the quotation phase. This occurs after all attributes and specifications have been mutually agreed upon. This process ensures clarity and avoids confusion between different assemblies and components..

Question 3

How long will it take to get a quotation on a cable assembly from the RF Assembly Builder?

When it comes to getting a quotation for cable assemblies you've designed using the RF Assembly Builder, we strive to maintain efficiency and prompt service. We have a comprehensive database of connectors and cables that helps us provide quotations as quickly as 48 hours. This rapid turnaround is standard unless you have a particularly complex request. Examples of challenging requests include assemblies with very short lengths or those involving operating frequencies that exceed the capabilities of the selected cable. In such cases, the quotation process may take longer as we assess the specific requirements and find the best solution for your needs.
